Project Name	Asset Management Portal
Maximum Marks	2 Marks

Problem – Solution Fit:

The Asset Management Portal addresses a common organizational challenge: the inefficient tracking and management of assets due to manual or outdated systems. By identifying this gap, our solution offers a centralized and automated platform that aligns with user behaviors and organizational needs.

Our proposed system:

Solves the real pain point of asset mismanagement and downtime.

Fits into existing workflows of IT teams and employees by providing an intuitive interface and automated notifications.

Increases adoption through seamless integration with commonly used tools (like ServiceNow email alerts, reports, and UI actions).

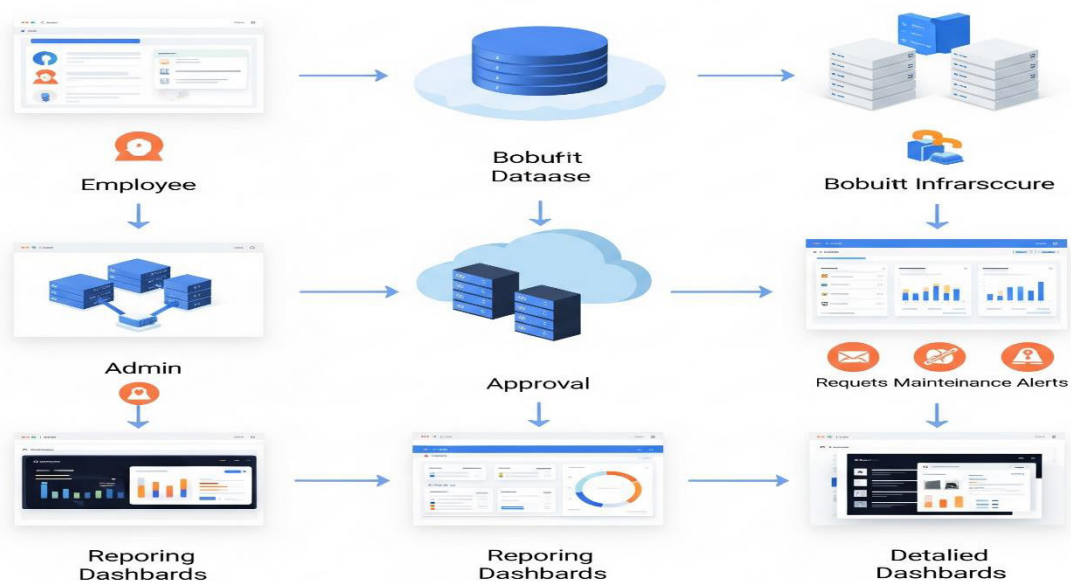

Enhances communication and decision-making through real-time reports and dashboards.

Builds trust and improves productivity by minimizing asset loss and ensuring timely maintenance.

Through this alignment of problem behavior and solution response, the portal ensures faster adoption, operational efficiency, and long-term organizational value.
